

AI Face Recognition System - Project Notes

1. Core Packages Installed: torch, torchvision, facenet-pytorch, opencv-python, numpy
2. Video & AI Pipeline: MTCNN for face crop, InceptionResnetV1 for embeddings
3. Performance: Frame-skipping mechanism implemented for stable FPS
4. Memory & Purge: Replaced old face images automatically with latest frames
5. Execution Context: python and python3 are unified inside virtual environment
6. Architecture: Single-file main.py design adopted to eliminate import issues
